

THE GENETIC CODE

Mother Nature on the planet Earth is rich well
In all kinds of beings, series products to tell
Body build unit with program is the small cell

The cells in nuclei heredity propel
By chromosomes universal genetic code spell
By DNA genes characteristics impel
For any kind of beings that will grow up well
Those were evolving from the passed ones that fell

Serial or parallel evolving as well
And function of time, in parallel lines duel

In the body cells that a trillion can sell
Is story of life narrated by silent bell
Disarmingly simple and elegant as well
