

## THE UNIVERSAL OSCILLATION

In universe anything is in oscillation  
Anything changes to that in opposition  
Any things increase and decrease by fluctuation  
Moving from one to the contrary situation  
The unified scatters by decomposition  
The dispersed unifies by amalgamation  
Stars gather from dust and powder by creation  
Dust, powder create stars in annihilation  
Earth's time rotates day and night by large vibration  
Its climate alternates hot and cold condition  
Its places swap dry and green configuration  
War and peace play each other by rotation  
Societies change wild in civilization  
Civilizations disappear by dissolution  
Countries alternate union and separation  
Humans' birth and death follow-up in repetition  
Their feelings interchange love and detestation  
Their minds fluctuate between hope and resignation  
By successive cycles of expansion-contraction  
From the Big Bang to the Big Crunch in oscillation  
The universe is moving in alternate action
